Genome Variant Analysis: Overview

1. Types of genomic variation

2. Visualization using IGV

3. File Formats for Variation Data

Genome Variant Analysis: Types of Genomic Variation

Variant or Mutation or Alteration or Polymorphism

- Changes in the genome sequence of a sample compared to a reference sequence
- Chromosomes: 22 autosomal pairs + 1 sex pair
  - Each set inherited from maternal and paternal germline cells

Germline Variant

- Variant inherited from one or both parental chromosomes
- Source of genetic differences between ancestral populations and individuals
- Polymorphism: >1% frequency in a population

Somatic Variant

- Mutation acquired during individual's lifetime
- Important to identify in sporadic cancers and other non-familial diseases

Genome Variant Analysis: Types of Genomic Variation

a. **Single nucleotide base substitutions**
   - Germline single nucleotide polymorphism (SNP)
   - Somatic single nucleotide variant (SNV)

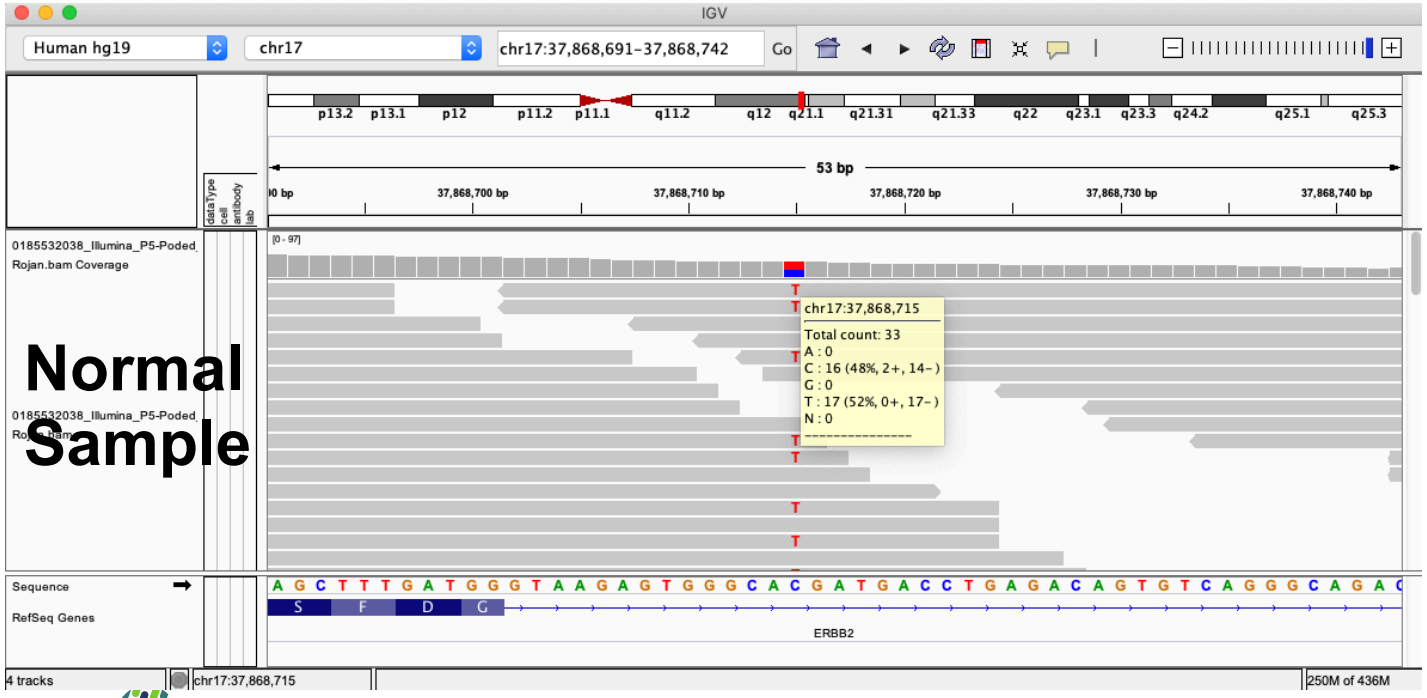
b. **Small insertions or deletions**
   - Germline or somatic insertion or deletion (INDEL)

c. **Copy number changes**
   - Germline copy number variant (CNV) or polymorphism (CNP)
   - Somatic copy number variant (CNV) or alterations (CNA)

d. **Structural rearrangements**
   - Germline or Somatic structural variant (SV)

Genome Variant Analysis: Single Nucleotide Polymorphism

- ~1.5 to 2 million **SNPs** per individual
- Identify SNPs from normal peripheral blood mononuclear cells (PBMC)

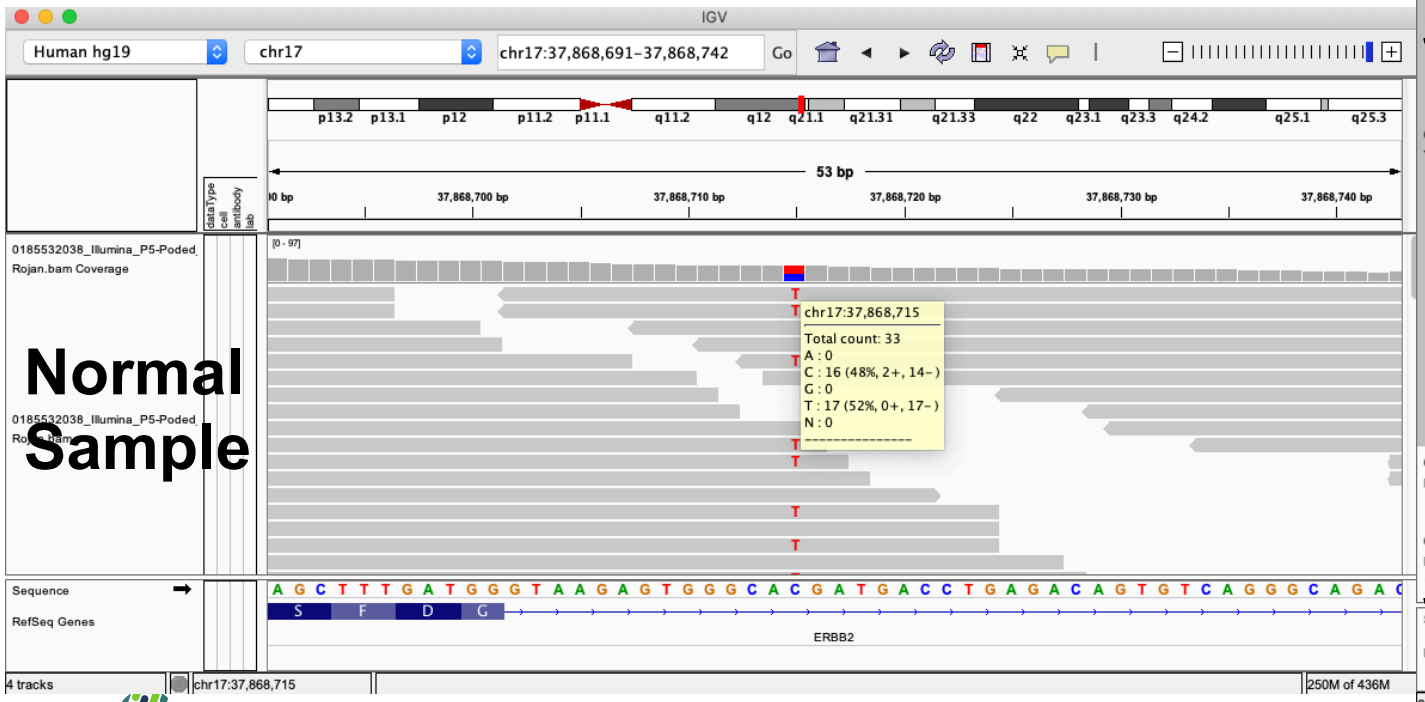


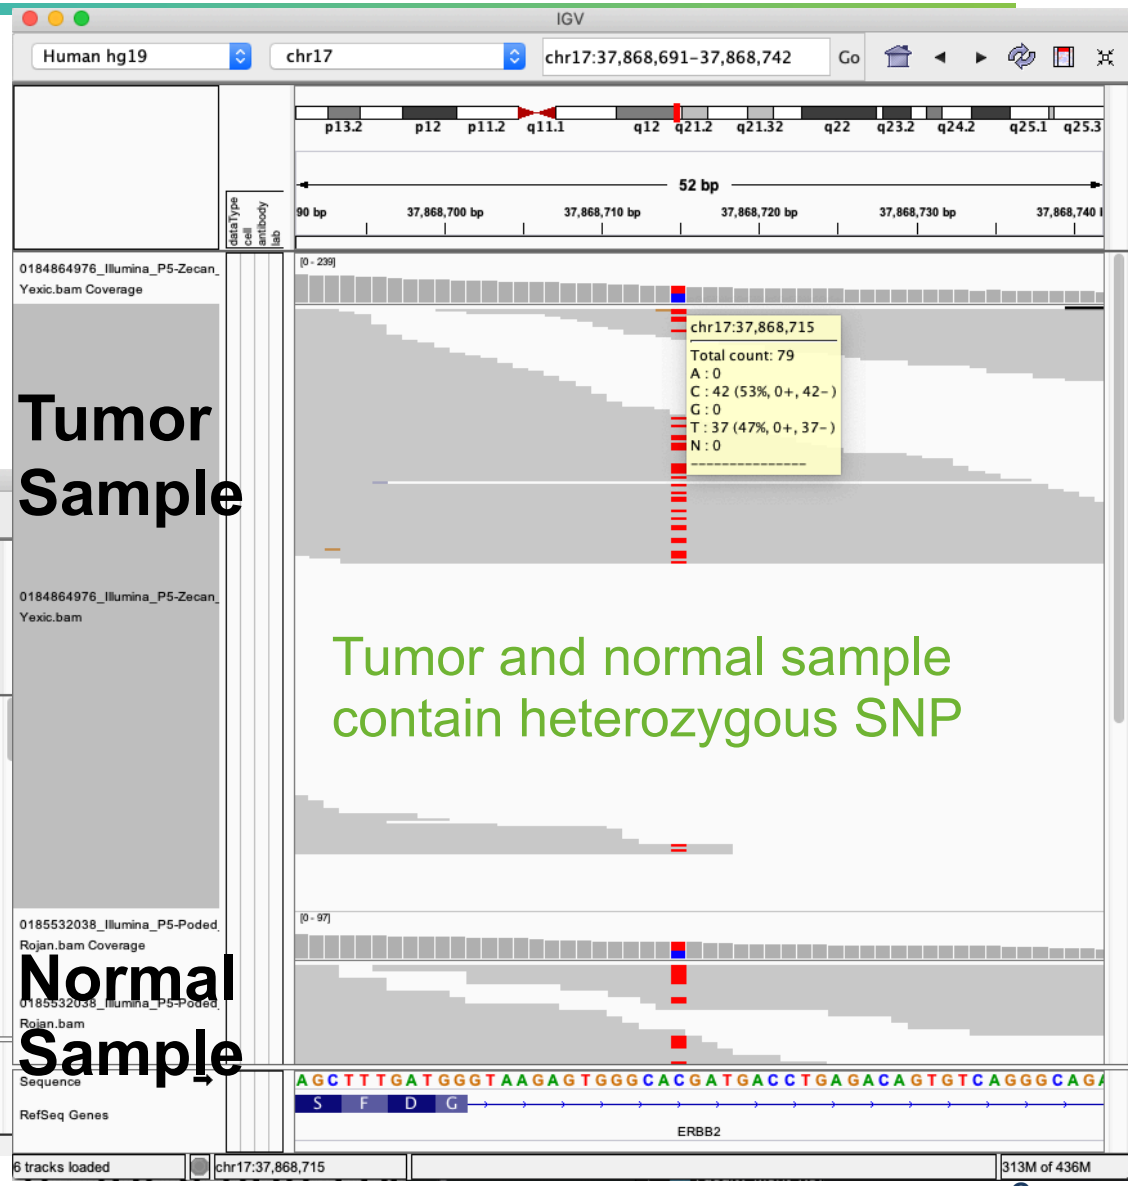
Heterozygous SNP with 37 reads containing the variant and having depth 79 reads

37/79 (47%) variant allele fraction (VAF)

Genome Variant Analysis: Single Nucleotide Polymorphism

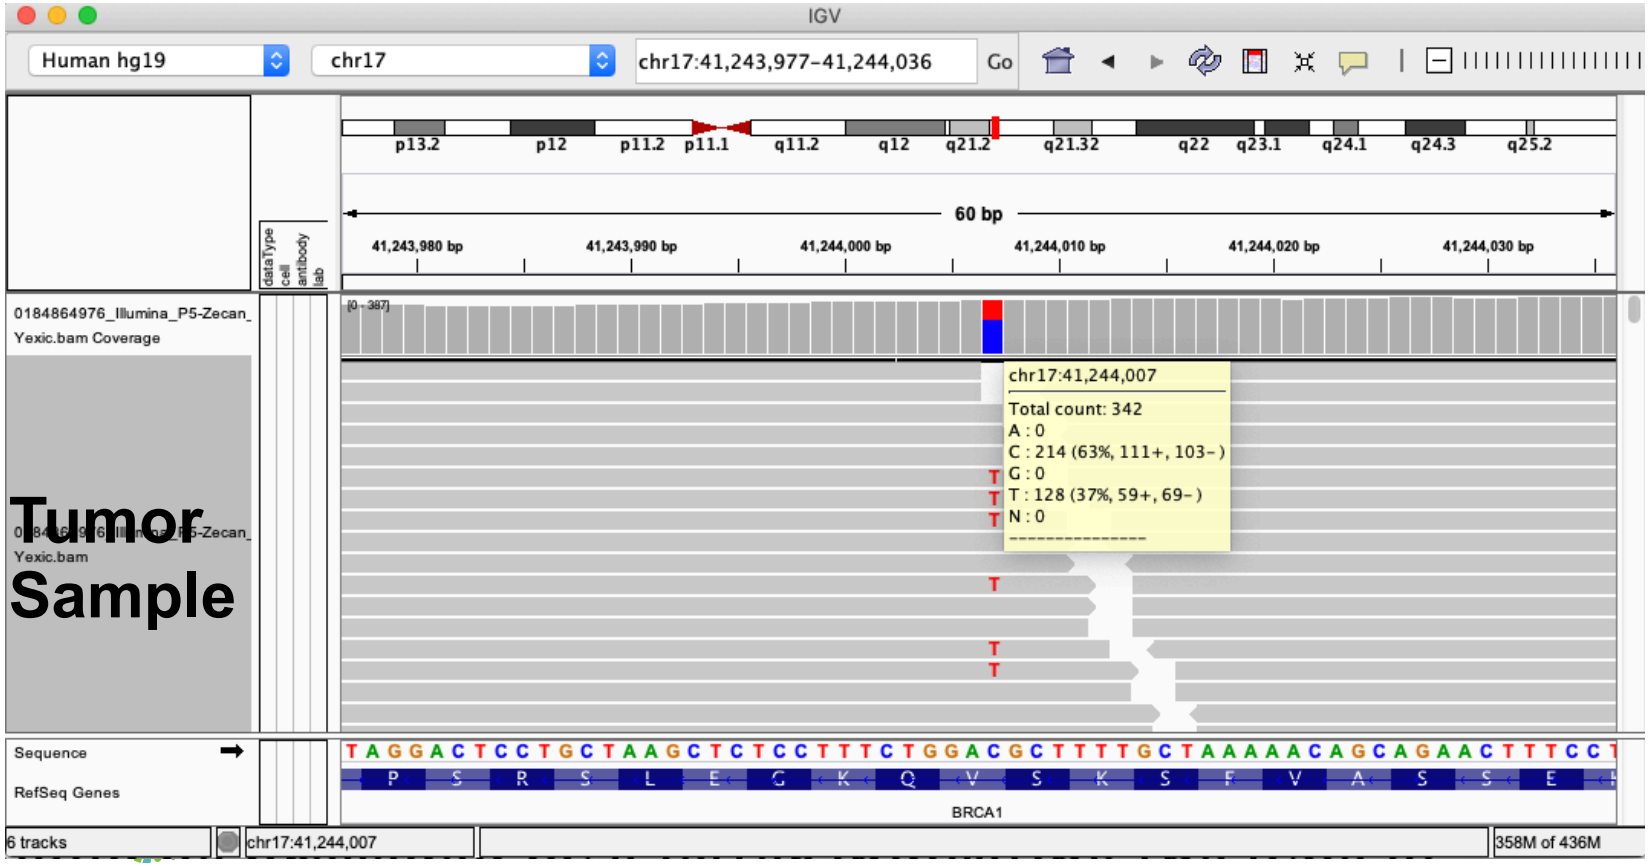
- ~1.5 to 2 million **SNPs** per individual
- Identify SNPs from normal peripheral blood mononuclear cells (PBMC)





Genome Variant Analysis: Single Nucleotide Variant (SNV)

- Somatic **SNV** requires comparing case (tumor) with control (PBMC)

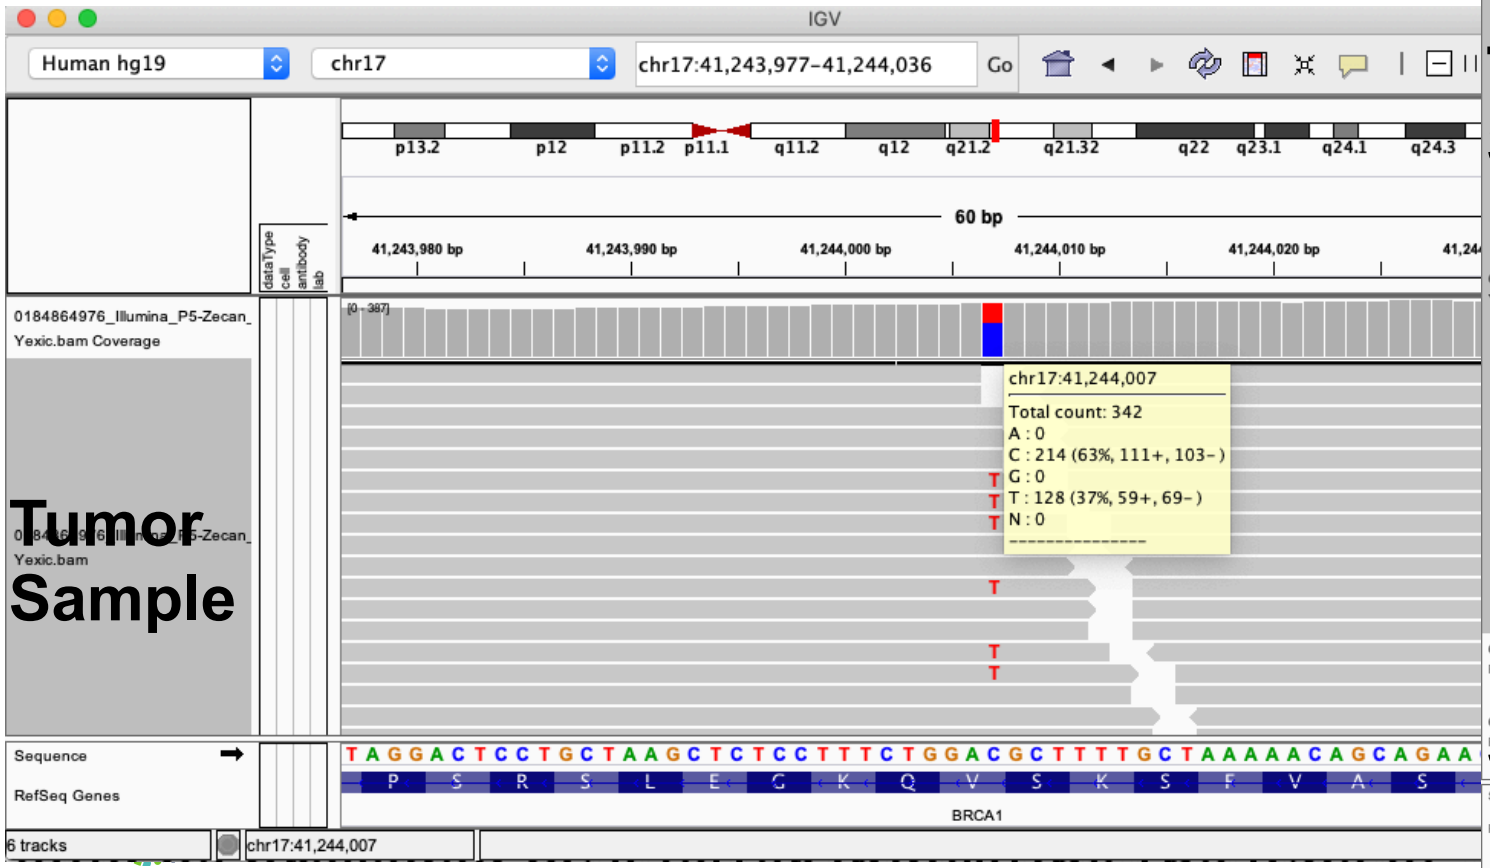


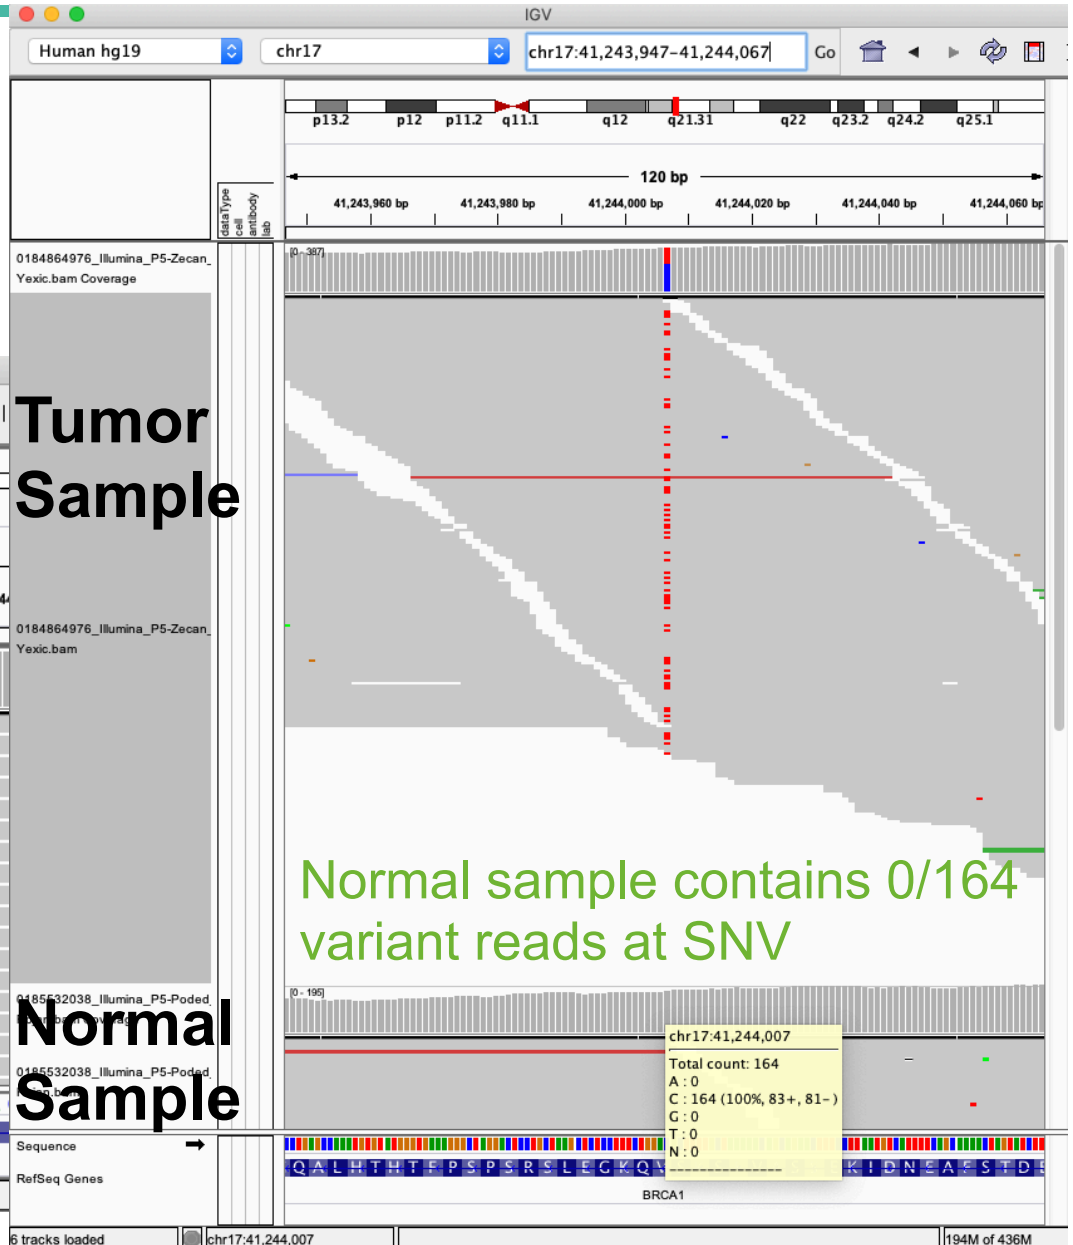
Potential SNV with 128/342 (37%) VAF

p.V1181I

Genome Variant Analysis: Single Nucleotide Variant (SNV)

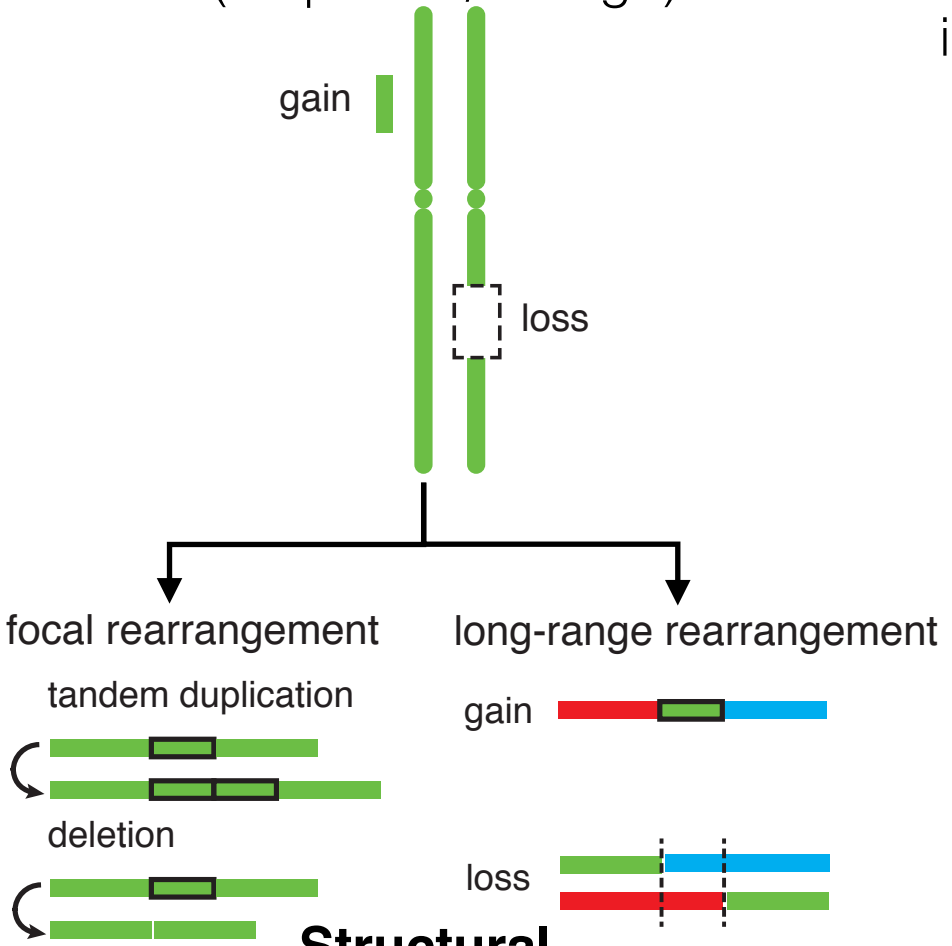
- Somatic **SNV** requires comparing case (tumor) with control (PBMC)





Genome Variant Analysis: Copy Number and Structural Variation

Copy number alterations
(amplitude/dosage)



Structural rearrangements
(location/configuration)

"discordant read pair"
read pairs with aberrant inferred fragment length

"copy number change"
abrupt change in read coverage

pair-mates unmapped

"split read"
split alignments

https://portal.gdc.cancer.gov/projects/TCGA-BRCA

Genome Variant Analysis: Common Variant File Formats

a. Variant Call Format (VCF)
   - http://samtools.github.io/hts-specs/VCFv4.2.pdf
   - Used mostly for SNV/SNP, INDEL, and SV

b. Mutation Annotation Format (MAF)
   - https://docs.gdc.cancer.gov/Data/File_Formats/MAF_Format/
   - http://software.broadinstitute.org/software/igv/MutationData
   - Tab-delimited format containing columns for mutation information and annotations
   - Used primarily for SNV/SNP and INDEL data

c. Browser Embedded Data (BED)
   a. https://bedtools.readthedocs.io/
   b. Used for any genomic features/region and annotations, including CNV and SV (BEDPE)

d. Others
   a. http://genome.ucsc.edu/FAQ/FAQformat
   b. GFF, WIG/bigWIG, etc.

Genome Variant Analysis: Variant Call Format (VCF)

Overview

I. R and Bioconductor Packages for Genomic Data

II. Tutorials

- Analyzing Genomic Data
- Analyzing and Annotating Variants
- Analyzing Sequence Data

Overview: Learning Objectives

I. R Bioconductor Packages for Genomic Data
   - `GenomicRanges, Rsamtools, VariantAnnotation`

II. Tutorials
   1. Genomic Data Analysis (`GenomicRanges`)
      i. Load, inspect, query a BED/SEG file
      ii. Genomic regions overlap
   2. Sequence Data Analysis (`Rsamtools`)
      i. Load, inspect, query a BAM alignment file
      ii. Extract sequences and qualities
      iii. Compute “pile-up” statistics at genomic loci
   3. Genomic Variants and Annotations (`VariantAnnotation`)
      i. Load, inspect, query a VCF file

Tutorial #1: Genomic Data Analysis

1. Loading and querying BED/SEG text files
    a. Use packages `GenomicRanges`
2. Download the VCF and SEG files for this tutorial
    - https://www.dropbox.com/sh/zoitjnobgp7l7c2/AABBIpTQcNA4lWYOFnV5dlMKa?dl=0
    - BRCA.genome_wide_snp_6_broad_Level_3_scna.seg
3. R Markdown file for tutorial on GitHub: Lecture16_GenomicData.Rmd

Tutorial #2: Sequence Data Analysis

1. Loading and querying a BAM file using `Rsamtools`
    a. Define the genomic coordinates and components to query (`ScanBamParam`)
    b. Scanning the BAM file (`scanBam`)
2. We will use the example from Lecture 15: Slides 19-22.
3. Download the BAM file for this tutorial
    - https://www.dropbox.com/sh/zoitjnobgp7l7c2/AABBIpTQcNA4lWYOFnV5dlMKa?dl=0
    - BRCA_IDC_cfDNA.bam
    - BRCA_IDC_cfDNA.bam.bai
4. R Markdown file for tutorial on GitHub: Lecture16_Rsamtools.Rmd

Tutorial #3: Variant Call Format (VCF)

1. Loading and querying VCF files in R
    a. Use packages `VariantAnnotation`
    b. Download the VCF files for this tutorial
    - https://www.dropbox.com/sh/zoitjnobgp7l7c2/AABBIpTQcNA4lWYOFnV5dlMKa?dl=0
    - GIAB_highconf_v.3.3.2.vcf.gz
    - GIAB_highconf_v.3.3.2.vcf.gz.tbi
2. R Markdown file for tutorial on GitHub: Lecture16_VariantCalls.Rmd

Homework #7: Genomic Data Analysis in R

Problem Set in R Markdown file

- Contains 4 problems with some code to prepare you for the questions.
- Please complete the assignment within the markdown file
- You will be evaluated on
  i. the results and outputs
  ii. your code and documentation
  iii. Partial points awarded for code with correct logic/function even if the final answer may be incorrect
